

Jonathan Vazquez

SENIOR SOFTWARE ENGINEER

PROFILE

Software engineer with 8+ years across backend systems and Android, primarily in Java and Kotlin. On the backend I build REST and GraphQL APIs and microservices with Spring Boot, JAX-RS and Micronaut, backed by PostgreSQL and shipped through Docker and CI/CD pipelines (Jenkins, GitHub Actions), following SOLID and Clean Architecture. On mobile I've led and shipped production Android apps end to end. Fluent in English, Spanish and Portuguese.

EMPLOYMENT HISTORY

Technical Lead, Raven

JUN 2021 — PRESENT · FREELANCE / CONTRACT · BANKING

Full-stack work for the banking sector. Built backend services and RESTful APIs in Java with Spring Boot and JAX-RS, plus the frontend components that consumed them. Implemented encryption and secure data handling to meet banking requirements, and set up CI/CD pipelines (Jenkins, GitHub Actions) that made releases faster and repeatable.

Mobile Lead Engineer, Pacto

MAY 2024 — JUN 2025 · RESTAURANT POS

Led Android development for a restaurant POS product in Java, structured with SOLID and Clean Architecture so the team could extend the codebase safely. Integrated AWS services (GraphQL, REST, DataStore) for reliable offline-capable data sync, and added app-side security and encryption. Partnered with product and design in agile to ship features that matched real restaurant workflows.

Software Engineer, Pinterest

NOV 2021 — FEB 2023 · SOCIAL PLATFORM

Built native in-app survey tools with the User Understanding team, giving product teams a direct channel to measure user behavior and satisfaction at scale. Owned the Android implementation end to end and advised on iOS, sharing code and patterns to keep both platforms consistent.

Python

JavaScript / Node.js

LANGUAGES

English — Professional

Spanish — Native

Portuguese — Conversational

Software Engineer, InnerDrive

FEB 2018 — SEP 2021 · FREELANCE / CONTRACT · SPORTS E-COMMERCE

Built the backend of a sports e-commerce platform as Java microservices (JAX-RS, Spring Boot, Micronaut). Tuned real-time data handling to keep the platform responsive under peak traffic, added Python microservices for data processing, and ran CI/CD pipelines (Jenkins, GitHub) for modular, independent deploys.

Software Engineer, YellowMe

APR 2020 — JUN 2021 · ON-DEMAND DELIVERY

Built and maintained features for a Flutter delivery app and managed deployments across multiple environments. Worked heavily with GraphQL services and built mobile-facing APIs for efficient backend-mobile communication.

Software Engineer, Hero Guest

MAR 2018 — JUN 2019 · RESTAURANT TRAINING

Built the first version of an Android training app for restaurant processes, including interactive courses. Migrated the codebase from Java to Kotlin to make it more maintainable, shipped new features, contributed to backend API work, and managed releases through Google Play Console.

Analyst Consultant, Cynthus

MAR 2017 — MAR 2018 · IT CONSULTANCY

Built the company intranet in Java and wrote API-integration services with JAX-RS, Spring and Vert.x to connect internal systems. Also acted as data consultant, providing technical support and tooling that streamlined internal workflows.

EDUCATION

Técnico en Sistemas Computacionales

Universidad del Golfo de México — Mexico
